Magnaflow UK aims to keep competitors quiet

Bromsgrove-based company takes delivery of motor racing silencer range

Magnaflow UK, a leading brand of performance exhausts, catalytic converters and other hardware, has just launched an extensive range of silencers that have been specifically developed for motor racing usage.

Competition vehicles in the UK must meet strict noise regulations that are set by the governing body of British motorsport, the Motor Sports Association. These currently range from between 105 to 110 Decibels (dB).

To ensure competitors can meet these regulations and maintain a competitive edge, Magnaflow UK has just taken delivery of a wide range of stainless steel silencers that are equipped with trusted sound damping devices – but do not reduce performance.

All products in the Performance Race Series range are endorsed by American motor racing legend Mario Andretti and have been manufactured with a 'straight-through, one-piece core'. This design feature enables vehicle noise levels to be significantly reduced, while allowing an unrestricted exhaust flow that maintains the vehicle's power output.

Magnaflow UK's Performance Race Series silencers are available in either 3.5" or 4" inlet/outlet sizes. They are also offered as 5"x8" oval or 6" round box configurations with either a 6" or 12" length. Each product boasts a polished stainless steel box and end caps, a perforated core and a stainless weld bead. All Performance Race Series products have a lifetime warranty.

Magnaflow UK managing director, Paul Tomlinson, sees great value in the Performance Race Series range. He said: "If you're a racing driver, I don't think you could do any better than to fit a silencer that's personally endorsed by a legend like Mario Andretti. His long and successful motor racing career has been built on making the right choices."
