Rollout of Magnaflow brand begins with performance converters

Fuel Parts, exclusive UK distributor of the Magnaflow performance exhausts brand, has begun the official rollout of the brand with the launch of a universal range of performance catalytic converters.

Magnaflow converters – all sold with a lifetime warranty – are designed for optimum flow and feature an all stainless steel body.

Three different converter styles are available to suit various levels of performance requirement, starting with the Mirror Finish converter, an entry level 'high flow efficient' 400 CPI ceramic catalyst that features a ribbed body for enhanced strength and funnel inlet/outlet to ensure smooth exhaust flow.

Mirror Finish comes in two series – 54300 and 943000 – and feature a larger diameter internal core for aggressive racecar sound.

Also in the range is the Street/Race style of performance converters, produced in a smooth flow spun stainless steel case and containing a 200 CPI metallic catalyst.

This range of converter is suitable for road use whilst offering race performance characteristics. Three different styles of body are available in the range, offering inline and offset inlet and outlets.

Completing the range is the Magnaflow Race Tubes, which have been developed in collaboration with The SCCA (Sports Car Club of America). This range is produced in a mirror finish stainless steel ribbed body and offers the Magnaflow 'Wide Open' unrestricted full bore characteristics. These units are produced for race applications only and are unsuitable for road use.
